PROFESSIONAL SUMMARY

Results-driven Computer Science undergraduate with hands-on experience in Software Development, Mobile Applications, and Artificial Intelligence. Skilled in building end-to-end systems including backend development, application logic, and database integration. Proficient in Python, Java, Flutter, SQL, and C++. Strong understanding of machine learning, data structures, and system design. Currently focusing on Agentic AI, LLMs, and Multimodal RAG systems. Seeking roles as Software Engineer, AI Engineer, or Backend Developer.

EDUCATION

BS Computer Science

Expected Spring 2027

Riphah International University, Islamabad

Relevant Coursework: Artificial Intelligence, Backend Development, Data Structures, Algorithms

TECHNICAL SKILLS

Programming: Python, Java, C++, SQL, Dart, HTML/CSS

Mobile Development: Flutter, Cross-platform Development, UI/UX Design

AI / ML: Machine Learning, NLP, Sentiment Analysis, Scikit-learn

Backend: Java, JDBC, API Development, Database Integration

Tools: Jupyter Notebook, VS Code, Git, GitHub, Google Colab

Concepts: Data Structures, Algorithms, System Design, OOP

Currently Learning: Agentic AI, LLMs, Deep Learning, React, Node.js

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication

PROJECTS

ChurnIQ — Telco Customer Churn Prediction (Machine Learning)

- Built an end-to-end ML pipeline using IBM Watson Telco dataset (7,043 records) for churn prediction
- Performed data cleaning, binary encoding, and One-Hot encoding using Pandas and NumPy
- Conducted correlation-based feature selection, reducing dataset to 26 high-impact features
- Trained and evaluated Logistic Regression, Random Forest, Decision Tree, and Gradient Boosting models
- Achieved ~80% accuracy and 0.84 AUC for churn classification
- Developed an interactive HTML/JavaScript dashboard for real-time monitoring and risk flagging
- Identified key churn drivers such as contract type and customer tenure

Student Performance Prediction (Machine Learning)

- Built ML models using Python, Pandas, Scikit-learn
- Performed data preprocessing and feature engineering
- Improved prediction accuracy for academic insights

Smart Quiz Mobile Application (Flutter)

- Developed cross-platform quiz app using Flutter
- Implemented dynamic UI and real-time scoring
- Enhanced user engagement and performance

Travel & Tourism Management System (Java + SQL)

- Developed desktop application with database integration
- Automated backend logic for booking system
- Improved efficiency of travel operations

Library Management System (Python)

- Built system for record management and search
- Reduced manual workload
- Improved data retrieval speed

Plagiarism Detection System (C++ / Python)

- Implemented Suffix Array algorithm
- Optimized complexity to $O(n \log n)$
- Improved performance over brute-force methods

Flappy Bird Game Clone (Python + Pygame)

- Developed 2D game with physics and collision detection
- Implemented gravity mechanics
- Added scoring system

Hotel Management System (Assembly Language)

- Built system using x86 Assembly
- Managed memory addressing and I/O operations
- Demonstrated low-level programming skills

CERTIFICATIONS

- Mobile Application Development with Flutter
- Python for Data Science & AI
- Java Desktop Application Development
- Foundations of Automata Theory

LANGUAGES

English (Fluent)

Urdu (Native)
